DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 3-19, 24-25 & 31 are rejected under 35 U.S.C. 102(b) as being anticipated by Meltser et al. (USPN 5,763,113).

Meltser et al. discloses a method and apparatus for monitoring the hydrogen and oxygen PEM fuel cells. Outputs from a cell/stack voltage monitor and a cathode exhaust gas H2 sensor are corrected for stack operating conditions and then compared to predetermined levels of acceptability. If certain unacceptable conditions coexist, corrective measures are automatically undertaken. A drop in voltage signals water flooding. Corrective action may entail a decrease in hydrogen supply or an increase in cathode supply. Hydrogen and oxygen are supplied to the cell in separate flow channels. Additionally an exhaust manifold is present for anode and cathode exhausts. Monitoring includes voltage measurements, a computer (controller). Corrected concentrations are compared to calibration constants to determine if conditions are back to normal. A hydrogen exhaust manifold collects unused hydrogen from the several anode flow channels and recirculates it back to the inlet manifold for reuse. Similarly, a cathode exhaust gas manifold collects exhaust gas from the cathode flow channels.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 20-23 & 26-30 are rejected under 35 U.S.C. 103(a) as being unpatentable over Meltser et al., as stated in the above paragraph and further in view of Mizuno (EP 0 716 463 A2).

Meltser et al. discloses moisture but not the use of a humidity device.

Mizuno discloses a polyelectrolytic fuel cell and the method of controlling the operation. If the humidity of the gas changes the moisture inside the cell is removed.

It would have been obvious to one of ordinary skill in the art at the time of the invention to remove moisture (i.e. reduce humidity) as taught by Mizuno in the Meltser et al. system because the operation of the fuel cell(s) is optimized.

Response to Arguments

Applicant's arguments with respect to claims have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to M. Alexandra Elve whose telephone number is 571-272-1173. The examiner can normally be reached on 6:30-3:00 Monday to Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Patrick J. Ryan can be reached on 571-272-1292. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
